WINTER 2020

Closing the Loop: 5 Steps to a Confident Clean

Whether your facility is in a healthcare, education, commercial office or high traffic environment, expectations for cleaning and hygiene have never been higher.

What has been cleaned? When was it cleaned? How often is it cleaned? And, most importantly, has it been done correctly? Is it REALLY clean?

Now you can answer all of those questions with our 5-step Confident Clean™ program:

1. Assess your facility

One size doesn't fit all when it comes to facility cleaning and maintenance procedures. With an on-site or virtual facility assessment, our Cleaning & Hygiene experts are able to identify all standard and specialized cleaning requirements, from flooring and surface materials to fixtures, bright-work and furnishings throughout the space.

Cleaning protocols will be developed to address specific cleaning and disinfecting requirements based on how each area of your facility is used. Products will be selected to match cleaning protocols and procedures.

2. Program Design

Your cleaning teams will be equipped with the correct PPE, chemistry and product innovations to ensure your cleaning teams perform at maximum efficiency and achieve exceptional results.

Get expert help establishing specific cleaning protocols with a product set that'll suit your facility's unique needs.

3. Implement

Once your team has the right cleaning supplies, tools and equipment needed to achieve your cleaning goals, our experts will help them put it all to proper use.

From cleaning best practices, correct dilution levels and equipment operation to outbreak prevention and protocol compliance, your teams receive the training they need to do it right. Both on-site and virtual training is available.

4. Optimize

Now your cleaning teams can work smarter - not harder. Our digital cleaning management tools mean you can track task completion, traffic volume, consumable use and more! Visual heatmaps show you opportunities to reallocate resources to the highest demand areas of your facility to optimize resources for better efficiency.

) "JUJUXU"

So how do you know it's REALLY clean?

Now you can validate your program's effectiveness with digital compliance measurement and audit tools. You'll spot re-training requirements, identify cleaning protocols that need more time to complete, and give your cleaning teams their best chance for success!

Reporting is quick and easy, too. From visual dashboards to detailed, real-time analytics, you can access the reporting you need on a daily, weekly or monthly basis, all with the click of a mouse.

If you're ready to start achieving a more Confident Clean™, we'd love to tell you more.

Winter Facility Essentials

Spilfyter Pre-Moistened Wipes

Sanitizing high-touch surfaces is key to help stop the spread of harmful pathogens. Add the Spilfyter Sanitizing Wipe Kit to your existing cleaning routine for quick and convenient sanitizing. These wipes work with your chosen cleaning solutions and are durable enough for your daily cleaning needs. Try it today with the Bioesque Botanical Disinfectant to eliminate pathogens or with the hospital-grade Oxivir® Tb RTU to kill COVID-19, Norovirus and more in under 60 seconds.

Product 7 cXY:
94400

Avmor 7T Sanitizer

Did you know that 79% of organizations have measures in place to offer additional hand hygiene products to their staff and customers? Keep your facility healthy with the 7T Hand Sanitizer. Made with 70% ethyl alcohol, this hand sanitizer is an effective choice for hand hygiene and its perfumed formula makes it pleasant to use.

Product 7 cXY:
2195180001

Diversey Oxivir® Tb RTU

Killing harmful micro-organisms is essential in keeping your staff, customers and patients safe. Stop the spread of COVID-19, Norovirus, H1N1, Human Coronavirus 229E, Influenza A and Hepatitis C in your facility with the Oxivir® RTU disinfectant. This hospital grade, ready-to-use disinfectant will quickly sanitize surfaces has a non-corrosive formula that's gentle to use.

Product 7 cXY.
100850916

Bioesque Botanical Disinfectant

Kill 99.9% of household germs fast with the Bioesque Botanical Disinfectant. This multipurpose disinfectant sanitizes, cleans and deodorizes surface in just one easy step. It's safe for use on a wide variety of surfaces with no rinsing required, including food contact surfaces.

Contact your local sales representative for availability.

ASK THE EXPERT

Winter has made its first appearance in most provinces and that means it's time to revisit winter safety! Correct application of ice melt can significantly reduce the risk of slips and falls. Our experts understanding the difference types of ice melt and how use them effectively and safely is key.

So, how does ice melt actually work? You might be surprised. Ice melt actually breaks the bond between ice and the surface it's on. Depending on the type, it does this in one of two ways:

Endothermic Ice Melt Products:

These lower the freezing point of the surface area (e.g., Rock Salt, Potassium Chloride, Urea)

Exothermic Ice Melt products: These react... with the moisture in the snow/ice to create heat (e.g. Magnesium Chloride)

Once you've selected the right type of ice melt for your facility, knowing how to apply it is important. Our experts recommend the following steps:

- Mix ice melt with sand to provide additional traction and extend how long the ice melt will last
- Sweep up excess ice melt to prevent environmental damage
- Keep ice melt away from kids and pets to avoid skin irritation or illness
- Use ice melt when the temperature drops below 0°C
- Don't use too much ice melt as it is wasteful and can harm the environment

Contact your local sales rep to find an ice melt suitable for your facility.

REGARD® Eco Melt 20kg

REGARD Eco Melt is fast acting, long lasting with consistent, even & free-flowing granulation that melts down to -24 degrees. (It's also safer to handle and gentler on the environment.)

Reach our to your local Cleaning & Hygiene representative to explore options on what Ice Melt is right for your facility needs.

Winter floor care concerns? We've got you covered.

Facility floor care is never out of season and with winter weather ahead it's the perfect time to think about how you can increase safety and appearance while maintaining the longevity of your floors. Let's tackle the two winter floor care concerns we hear about most: how to remove salt and salt stains, and how to choose the right mats.

Removing Salt Stains

Follow these simple steps to remove salt residue from floors and prevent damage to surfaces and materials:

1. Choose the right product

Choose a cleaning solution with compatible acidity – for best results choose a product with a pH balance of 3 to 4.

2. Apply the solution

Mix cleaning solution with water based on the selected cleaning solution and apply it to the soiled area, allowing it to set in for up to 10 minutes.

3. Remove the salt from the area

Using an extractor or mop will remove

excess ice melt on your floor and may need to be done more than once to remove all salt and dirt debris.

Choose the Right Matting

Regular maintenance of floors is critical but there is another line of defense you can add to your facility floor maintenance. Implementing matting into your facility will help reduce safety risks, improve the look of your facility and increase your floors lifespan.

Implementing outdoor and entrance matting will catch excess dirt debris, salt and liquid in your facility to minimize the damage to your floors.

Using a scraper mat for outdoor entry ways will stop mud, salt and other debris from being tracked indoors. When visitors enter your facility, a wiper mat will trap any moisture and debris not picked up by the scraper mat. Increased vacuuming and extracting may need to be done to

Talk to our cleaning and hygiene experts about more ways to winterize your facility to make cleaning easier and your building safer!

Floor Cleaning Essentials

Scraper Mat

Wiper Mat

Avmor's EP88 makes it easy by neutralizing alkaline residues and effectively removing salt and calcium deposits on most floor surfaces and industrial carpeting.

Placing a Scraper Mat outside your facility will help to reduce the amount dirt and debris from being tracked into your facility entranceway. Inside the entrance of your facility a wiper mat will trap any excess moisture and debris the scraper mat didn't catch.

Electrostatic Disinfecting for Small Spaces

The PAX-100 Handheld Electrostatic Sprayer is your solution to quickly and effectively disinfecting all surfaces and areas in your facility.

Reduce disinfection time by 90% with the help of electrostatic technology. The Pax-100 can cover up to 6,000 square feet with a single tank and can disinfect an average sized room in under one minute. It's been engineered to use the least amount of product needed and is compatible with all water-soluble disinfectants. Compatible with the Clorox Total 360 chemistry, Oxivir Tb, and Bioesque Botanical Solution, the PAX-100 is suitable for a variety of environments.

Now you can feel more confident in your facility's cleanliness and save valuable time in your cleaning routine.

NEW! Spore Defense™ by Clorox®

This ready-to-use sporicidal solution is just what acute and long-term care facilities have been waiting for. Spore Defense by Clorox kills C. diff in 5 minutes and COVID-19 and 38 additional bacteria, viruses and fungi in just 1 minute.

Tested and proven compatible for all common healthcare surfaces, this new product is a game changing solution for hard-to-eliminate pathogens. Pair this disinfectant with the Clorox® Total 360® electrostatic disinfecting system to effectively eliminate these threats with 360 degree coverage. Reach even the sides, undersides and back of furnishings and equipment!

Use Spore Defense™ in your every day cleaning and disinfecting routines to help protect vulnerable acute and long-term care facility patients and residents as well as facility staff and visitors.
